

OHS SILICA TRAINING

BOOK NOW AT THE CFMEU HIGH RISK TRAINING CENTRE

By now, it should come as no surprise to anyone in our industry of the inherent dangers and adverse health implications when working with products that contain crystalline silica.

But like any OHS hazard, there are always ways to both eliminate and mitigate such health and safety problems.

One of the first steps to do this, is to know exactly what you're working with and the safest ways to control and/or eliminate the hazards and/or risks.

Information, instruction AND training is mandatory under Section 319R of the Occupational Health and Safety Amendment (Crystalline Silica) Regulations 2021.

The CFMEU High Risk Training Unit now has a comprehensive and all-embracing training module to meet your employers' legal obligations to undertake such training for their workers – and it's free.

Don't waste any time – book yourself and all our members into this high quality and comprehensive OHS training package for everyone's health, safety and well-being – because when it comes to working with crystalline silica containing materials, you can't afford not to!
